

What will be in my share?

That's the #1 question we get: What will be in my share?

The truth is, we don't know. Mother nature is in charge. We can tell you we plant LOTS of great things every year. Every year we experiment with something new. Every year we take a break from something which needs a break. Some years the weather is perfect for kale, other years not so much. The cool thing about being a CSA member is, if we have a bumper crop of something you get the benefits. If a crop fails, we all miss it together.

We know you still want to know what is in a share! Here is a sample of what a full size share looks like. (divide in 1/2 for an approximation of a 1/2 share.) ***Below is an example of what a 2012 share was:***

= lbs.

Each = equals a number you count out example - 2 heads of lettuce (not 2#'s)
